

# Sammamish River Habitat Restoration

## Trail detour and parking stall closures

### What will this project do?

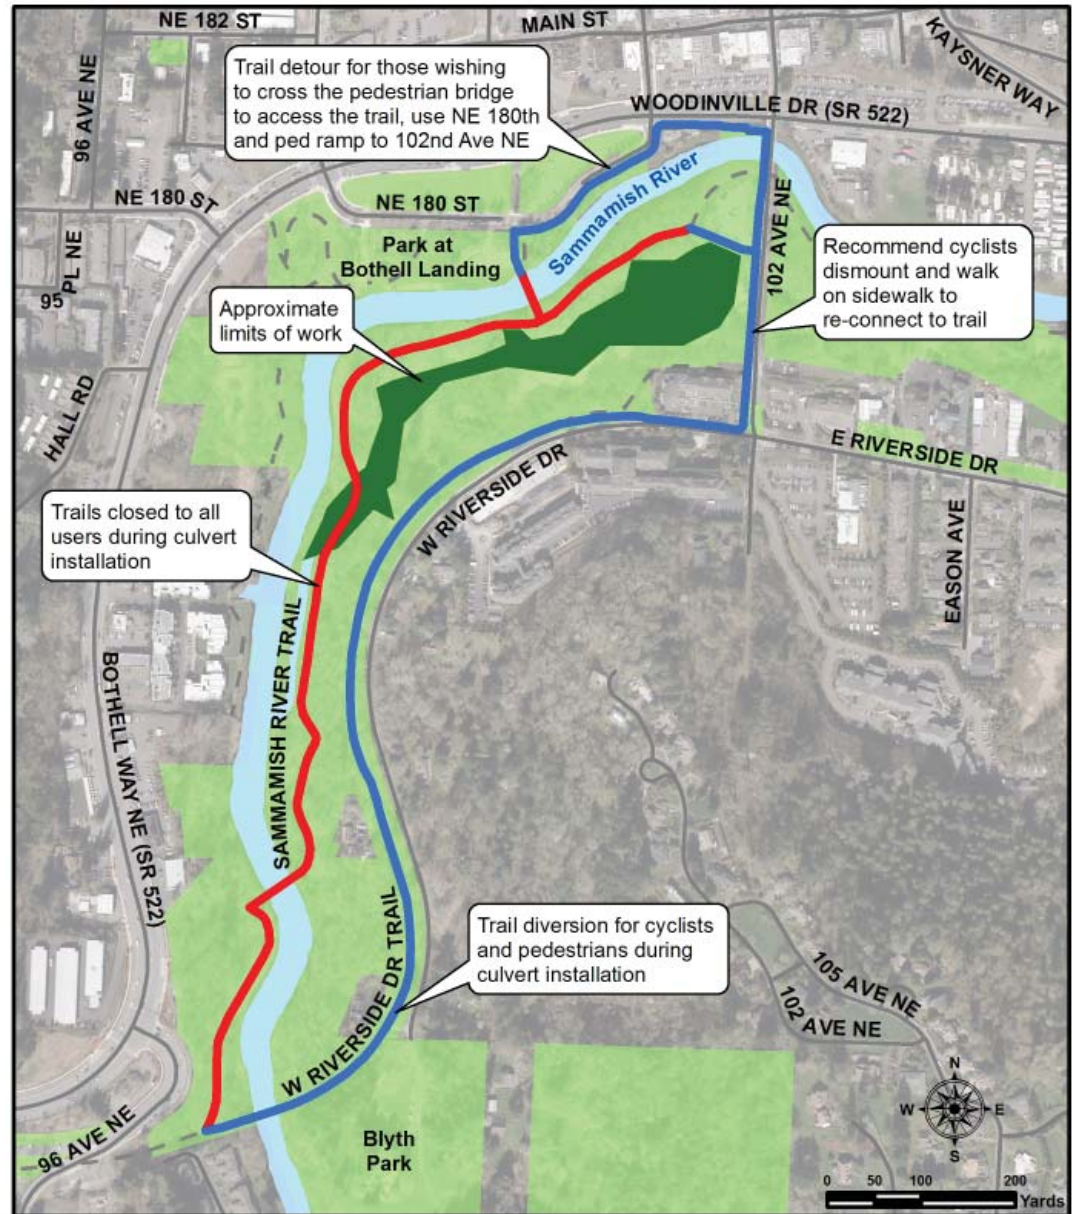

It will reconnect and restore 1,100 feet of an old remnant channel and floodplain of the Sammamish River.

### Project goals:

- Restore about eight acres of floodplain with native plantings.
- Remove invasive plant species.
- Hydraulically reconnect the restored area at both ends to the river to make it accessible for fish, especially Chinook and Coho salmon.

### Trail changes:

While the contractor installs the culvert, part of the Sammamish River Trail will be detoured to the West Riverside Drive Trail/Burke Gilman Trail.

**Approximate dates for trail detour:**

**August to mid-September**

**Parking and contact information on reverse.**

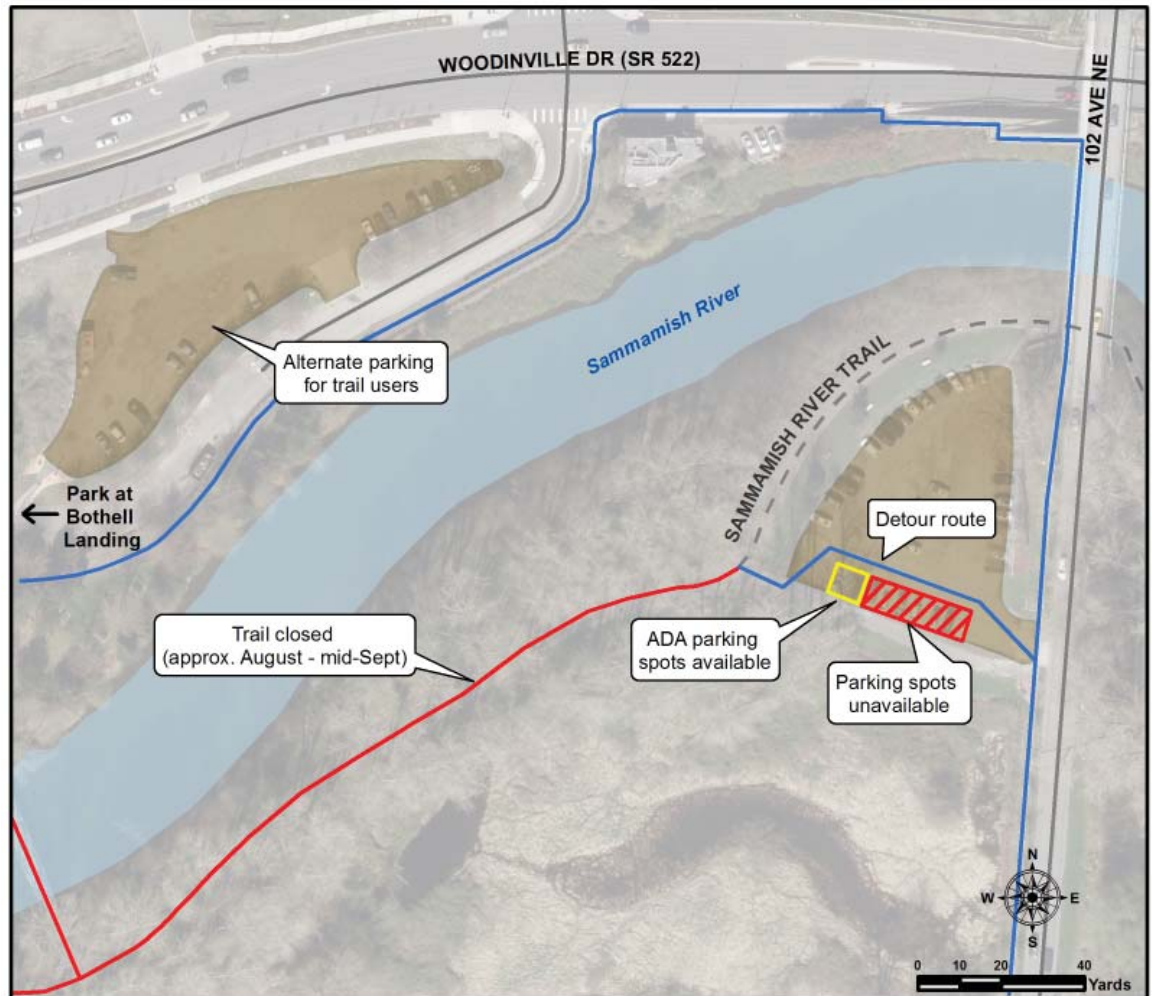

# Sammamish River Habitat Restoration

## Parking stall closures during construction

### Parking lot changes:

- Some stalls in the south part of the Sammamish River Trail parking lot will be temporarily closed. These stalls, along the trail connecting to 102nd Ave NE, will be used for construction staging and truck access.
- Disabled parking will still be available.
- More parking is available near the Park at Bothell Landing.

**Approximate dates for temporary parking stall closures: Mid-June to October**
